Feature Checklist

Feature	Performance	Additional Comments
Indoor/outdoor usage	Indoor use only	
Lightfastness	Over 100 years EPSON Archival Ink Over 40 years UltraChrome Ink 5 years Photographic Dye Ink	Lightfastness ratings are based on accelerated testing of prints on specialty media, displayed indoors, under glass. Lightfastness only estimates the life of the ink, not the media
Gas-fastness	Excellent with EPSON Archival and UltraChrome Ink; poor with dye-based ink	With regard to dye-based images, lamination or framing under glass greatly increases gas-fastness.
Dark storage	Good	Prints stored in a photo album in a protective sleeve will remain stable.
Resistance to water	Good	Bleeding does not occur with incidental water contact. However, this paper is not recommended for use in wet conditions.
Ink drying time	Immediate (less than 30 seconds)	Ink is dry to the touch after printing. However, it takes 24 hours before it cures and becomes durable.
Lamination feasibility	Hot lamination or cold lamination	Lamination extends the life of the print and and increases durability.

NOTE: Actual print stability and longevity will vary according to image, display conditions, light intensity, humidity, atmospheric conditions, and post-printing treatments. Epson does not guarantee stability or longevity. For maximum print life, display all prints under glass or lamination or properly store them.
